PROFILE

Ruby on Rails developer with **1+ year of hands-on production experience** building and shipping real-world web applications — two live e-commerce platforms (50,000+ monthly visits, 200+ orders processed), a restaurant ordering system, and a multi-module HR SaaS delivered across 5 Scrum sprints. Comfortable across the full Rails stack: ActiveRecord, Hotwire, REST APIs, authentication (Devise), rate-limiting (Rack::Attack), pagination (will_paginate), and VPS production deployment. Currently integrating AI capabilities into Rails applications — RAG pipelines, LLM APIs, and vector search. Domain experience spans **e-commerce, ERP, and HR platforms**. Also proficient in ASP.NET Core. A curious, self-driven developer who thrives on learning new technologies and embracing new challenges — open to Rails roles in Tunis or remote.

EXPERIENCE

Ruby on Rails Developer — Smart Order App

Jul 2025

B-Solutions INTERNSHIP

- Built a full-stack QR-code restaurant ordering system in **Rails 8**: customers scan, browse the menu, and place orders — appearing in the back-office in real time via WebSockets (<1s latency).
- Applied Rails best practices: RESTful routing, ActiveRecord associations, Stimulus.js for reactive UI, **Devise** for staff authentication, and **acts_as_taggable** for flexible menu item categorisation.
- Packaged the back-office as a standalone **Electron.js desktop app** — fully offline, deployable on local network with no cloud dependency.
- Delivered live statistics dashboard with order volume, revenue, and peak-hour reporting.

Client engagement FREELANCE LIVE

50,000+ visits / month 200+ orders processed 400+ products

- Architected and delivered a production-grade **Rails 8 e-commerce platform** for luxury perfume decants — full catalogue (400+ SKUs), cart, cash-on-delivery checkout, and comprehensive admin back-office.
- Implemented secure authentication with **Devise**, rate-limiting with **Rack::Attack**, and paginated listings with **will_paginate**.
- Applied e-commerce best practices: N+1 query elimination, eager loading, and DB indexing — site handles 50,000+ monthly visits without performance issues.
- Self-managed VPS deployment (Nginx + Puma) and ongoing production maintenance — zero downtime since launch.

Client engagement FREELANCE LIVE

- Built and deployed a second production Rails e-commerce store with full admin dashboard: catalogue management, order lifecycle tracking, customer management, and sales analytics.
- Reused and refined the Rails architecture from bissofragrance — shared gem stack (Devise, Rack::Attack, will_paginate), adapted to a lighter catalogue and admin UI.

Fullstack Intern — Digital Workplace Platform (FlowUp)

Feb 2025 → May 2025

Aetos Technology PFE

- Designed and delivered 3 modules of an all-in-one HR SaaS in ASP.NET Core + Angular across 5 Scrum sprints: **Micro-Learning**, **Communication** (real-time feed, SignalR chat, groups), and **HR management**.
- Integrated a complete **RAG AI agent** — C# document chunking, Ollama embeddings, vector DB — experience being applied to ongoing Rails AI integration work.
